

SECURITY

FOR MICROSOFT
SHAREPOINT SERVER

Protect sensitive data in Microsoft SharePoint
with multilayered technology

CYBERSECURITY
EXPERTS ON YOUR SIDE

What is a SharePoint security solution?

A SharePoint security product is designed to protect the central collaboration servers of an organization from threats. This product should be installed on any SharePoint server in an organization to ensure that resources are not infected. Companies nowadays put their organization at risk by allowing users to save and upload files to a company SharePoint, without adequately protecting their SharePoint from malicious files. A single user uploading a malicious file to SharePoint can instantly cause a cascade effect that renders your organization's files inaccessible.

ESET Security for Microsoft Sharepoint provides advanced protection to all SharePoint servers to protect against malicious uploads and unwanted files. It pays special attention to ensure the servers are stable and conflict-free to keep maintenance windows and restarts at a minimum level in order to not disrupt business continuity.

Why SharePoint Security Solution?

RANSOMWARE

Ransomware has been a constant concern for industries across the world ever since Cryptolocker in 2013. Despite ransomware existing for far longer, it was never a major threat that businesses were concerned about. However, now a single incidence of ransomware can easily render a business inoperable by encrypting important or necessary files. When a business experiences a ransomware attack, they quickly realize that the backups they have are not recent enough, so the business feels as though they must pay the ransom.

With a central SharePoint, ransomware can be an even bigger problem due to a users' ability to save or upload ransomware to it. ESET SharePoint Security solution provides layers of defense to not just prevent ransomware, but to detect it if it ever exists within an organization. It is important to try and prevent and detect ransomware, as every time someone pays a ransom, it convinces the criminals to continue to utilize this attack.

TARGETED ATTACKS AND DATA BREACHES

Today's cybersecurity landscape is constantly evolving with new attack methods and never before seen threats. When an attack or data breach occurs, organizations are typically surprised that their defenses were compromised, or are completely unaware that the attack even happened. After the attack is finally discovered, organizations then reactively implement mitigations to stop this attack from being repeated. However, this does not protect them from the next attack that may use another brand-new vector.

ESET SharePoint Security solution uses Threat Intelligence information based on their global presence to prioritize and effectively block the newest threats prior to their delivery anywhere else in the world. Servers are typically a more sought after target due to them usually containing sensitive or confidential data. To better protect against these increased attempts ESET SharePoint Security solution features cloud-based updating to respond quickly in the case of a missed detection without having to wait for a normal update.

FILELESS ATTACKS

Newer threats, called fileless malware, exist exclusively in computer memory, making it impossible for file-scanning based protections to detect it. Further, some fileless attacks will leverage currently installed applications that are built into the OS to make it even harder to detect a malicious payload. For example, the use of PowerShell in these attacks is very common.

ESET SharePoint Security solution has mitigations in place to detect malformed or hijacked applications to protect against fileless attacks. It also includes scanners to constantly check memory for anything that is suspicious.

ESET's solutions provide layers of defense to not just prevent malware but to detect it if it ever exists within an organization.

With a central SharePoint, ransomware can be an even bigger problem due to a users' ability to save or upload ransomware to it.

Newer threats, called fileless malware, exist exclusively in computer memory, making it impossible for file scanning-based protections to detect it.

"ESET has been our reliable security solution for years. It does what it has to do; you do not have to worry. In short, ESET stands for: reliability, quality and service."

The ESET difference

MULTILAYERED PROTECTION

ESET combines multilayered technology, machine learning and human expertise to provide our customers with the best level of protection possible. Our technology is constantly adjusting and changing to provide the best balance of detection, false positives and performance.

DATABASE DIRECT ACCESS

An optional method to pull files where ESET SharePoint Security bypasses the SharePoint object model and pulls the file directly from the dedicated database server to provide even better performance.

UNPARALLELED PERFORMANCE

Countless times, an organization's biggest concern is the performance impact of an endpoint protection solution. ESET products continue to excel in the performance arena and win third-party tests that prove how light-weight our endpoints are on systems.

WORLDWIDE PRESENCE

ESET has offices in 22 countries worldwide, R&D labs in 13 and presence in over 200 countries and territories. This helps to provide us with data to stop malware prior to it spreading across the globe, as well as prioritize new technologies based on the most recent threats or possible new vectors.

"...the best testimony? The stats from our helpdesk: after we introduced ESET, our support guys don't log any calls – they don't have to deal with any antivirus or malware-related issues!"

— Adam Hoffman, IT Infrastructure Manager; Mercury Engineering, Ireland; 1.300 seats

The technology

Our products and technologies stand on 3 pillars

ESET LIVEGRID®

Whenever a zero-day threat such as ransomware is seen, the file is sent to our cloud-based malware protection system – LiveGrid®, where the threat is detonated and behavior is monitored. Results of this system are provided to all endpoints globally within minutes without requiring any updates.

MACHINE LEARNING

Uses the combined power of neural networks and handpicked algorithms to correctly label incoming samples as clean, potentially unwanted or malicious.

HUMAN EXPERTISE

World-class security researchers sharing elite know-how and intelligence to ensure the best round-the-clock threat intelligence.

A single layer of defense is not enough for the constantly evolving threat landscape. All ESET Security products have the ability to detect malware pre-execution, during execution and post-execution. Focusing on more than a specific part of the malware lifecycle allows us to provide the highest level of protection possible.

Security Management Center

All ESET solutions are managed from a single pane of glass – ESET Security Management Center – that can be installed on Windows or Linux. In addition to installing, ESET has a virtual appliance that you can simply import in for quick and easy setup.

“When we found ESET, we knew it was the right choice: reliable technology, robust detection, local presence and excellent technical support, everything that we needed.”

— Ernesto Bonhoure, IT Infrastructure Manager; Hospital Alemán, Argentina,

Use cases

Fileless malware

Use Case: File-less malware is a relatively new threat and due to it only existing in memory requires a different approach than traditional file-based malware.

SOLUTION

- ✓ A unique ESET technology, Advanced Memory Scanner, protects against this type of threat by monitoring the behavior of malicious processes and scanning them once they decloak in memory.

- ✓ If ESET Security for Microsoft SharePoint is unsure of a potential threat, it has the ability to upload the sample to ESET's Cloud Sandbox, Dynamic Threat Defense, to make the highest quality decision on whether something is malicious.

- ✓ If a threat is confirmed, reduce data gathering and investigation time by uploading threat into ESET Threat intelligence to provide information on how the threat functions.

Zero-day threats

Use Case: Zero-day threats are a major concern for businesses due to them not knowing how to protect against something that they have never seen before.

SOLUTION

- ✓ ESET Threat Intelligence provides data on the newest threats and trends as well as targeted attacks to help businesses predict and prevent the newest threats.

- ✓ ESET endpoint products leverage heuristics and machine learning as part of our multilayered approach to prevent and protect against never before seen malware.

- ✓ ESET's cloud malware protection system automatically protects against new threats without the need to wait for the next detection update.

Ransomware

Use Case: Some businesses want extra insurances that they will be protected from ransomware attacks. In addition, they want to ensure their network drives and SharePoint databases are safe from being encrypted.

SOLUTION

- ✓ On upload of a file into the SharePoint Server, ESET scans files to ensure they are not malicious.

- ✓ Network Attack Protection has the ability to prevent ransomware from ever infecting a system by stopping exploits at the network level.

- ✓ Our multilayered defense features an in-product sandbox that has the ability to detect malware that attempts to evade detection by using obfuscation.

- ✓ Leverage ESET's cloud malware protection system to automatically protect against new threats without the need to wait for the next detection update.

- ✓ All products contain post-execution protection in the form of Ransomware Shield to ensure that businesses are protected from malicious file encryption.

- ✓ If ESET Security for Microsoft SharePoint is unsure of a potential threat, it has the ability to upload the sample to ESET's Cloud Sandbox, Dynamic Threat Defense, to make the highest quality decision on whether something is malicious.

About ESET

ESET—a global player in information security—has been named as the only Challenger in the 2018 Gartner Magic Quadrant for Endpoint Protection Platforms.*

For more than 30 years, ESET® has been developing industry-leading IT security software and services, delivering instant,

comprehensive protection against evolving cybersecurity threats for businesses and consumers worldwide.

ESET is privately owned. With no debts and no loans, we have the freedom to do what needs to be done for the ultimate protection of all our customers.
